

**Forced vent units frame size 63 to 200  
ILI-series**

In the course of a continuous improvement process, WISTRO will replace the successful IL external fan series with the new ILI external fan series. After sizes 132 and 160 (and therefore also size 180 and size 200) have benefitted from the improvements, frame size 63 up to 112 are following. The improvements are mentioned below.

## Changes to the product

- Use of the internal intake space is retained. This enables the installation of the external fan directly next to surfaces, whereby a volume flow of about 80% can still be achieved. In addition, this enables very short installation times.
- In future, the terminal box will be flush with the rear edge (compare Annex A). The dimensions of the external fan units remain unchanged, which enables simple replacement of the current series (see Annex B). Especially for size 63 to 80, the advantage is a reduced overall length, e.g. for radially widened ducts.
- The squarish shape of the terminal box allows to turn the terminal box in all directions.
- The fan grills as well as the transition area on the outer edge of the fan flange have been optimised according to aerodynamic criteria, with improves noise emissions and yields higher efficiencies.
- Higher efficiency is achieved by the use of the new motor for Size 160, which can now also be used at single phase 60Hz (2-pole version). This enables a further reduction in the number of variants.
- For size 132 and 160, 2-pole variantes for 400/690V are available.
- The fan wheels for frame size 90 up to 112 are aerodynamically optimised und have a significantly improved efficiency. In connection with the new motor, e.g. size 100 has about 14% less power consumption, while the air power is increased by 22% (compared at 230V/50Hz).
- Size 63-80 have also a new motor, which has a substantially increased torque at single phase operation. Thus, the motor starts also at lower temperature safely. Additionally, the efficiency is improved. E.g. size 71 has about 12% less power consumption while the volume flow is similar (comapred at 230V/50Hz).
- Due to new motors, the electrical data have changed.
- A shorter physical length is guaranteed by the new plug connection version, as in future, the plug connector can be mounted at the position of the terminal box (Annex

---

A Figure 3). With the current series, the plug is installed on the b side bearing cover of the external fan unit.

With the introduction of the new fan units, the fan tubes for sizes 180 and 200 will be changed.

Due to a new production method, the contour will be changed slightly, however without impairing the current dimensions and technical parameters (siehe Annex C).

In future the tubes will be provided with longer fastening holes in order to facilitate installation, e.g. 6,6x8 mm will get 6,6x9 mm.

## Annex F ERP-Efficiencies frame size 160 - 200 ILI

The ErP implementation ordinance (327/2011 of the EU dated 30 March 2011) defines specific instructions for the implementation of the ErP Directive in the field of fans. It specifies minimum efficiencies for fans with an electrical input power of 125 W to 500 kW. Unlike the standard IEC 60034-30-2008 which came into effect in June 2011 and which only specifies the minimum efficiency of motors (IE2/IE3), the ErP Directive considers the complete, operational system consisting of the motor and the fan. The second and final stage of the Ordinance comes into effect on 01.01.2015 and affects Size 160 (and therefore also Size 180 and Size 200) Size 160 already complies with the directive which will come into effect from 01.01.2015. Details can be found below.

### Nominal data: Size 160 - 200 Type C62 2-2 IL

Phase	3~
Rated voltage	400V
Circuit	Y
Frequency	50Hz
Type of data recording	Free-blowing
Power consumption $P_e$	0.171 kW
Measurement category	A
Efficiency category	Static

### Calculation of target efficiency from 1.01.2015:

$$\eta = 2.74 \cdot \ln(0.171) - 6.33 + 40$$

	Actual	Target 2013	Target 2015
<b>Overall efficiency <math>\eta_{es}</math></b>	30.6 %	24.8 %	28.8 %
<b>Efficiency class N</b>	41.8	36	40
